

How to run the terminal based virtual classroom application

The project is tested to run in NetBeans IDE, and instructions here are also for the same.

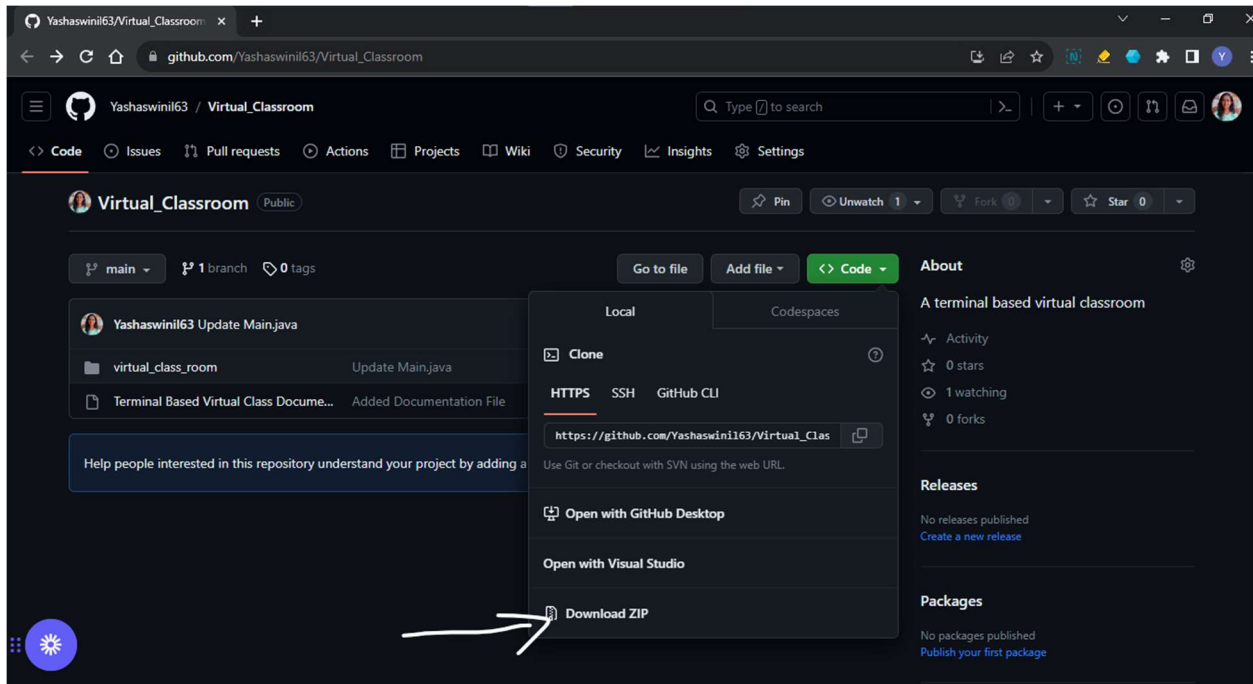

Link to the application: https://github.com/Yashaswinil63/Virtual_Classroom

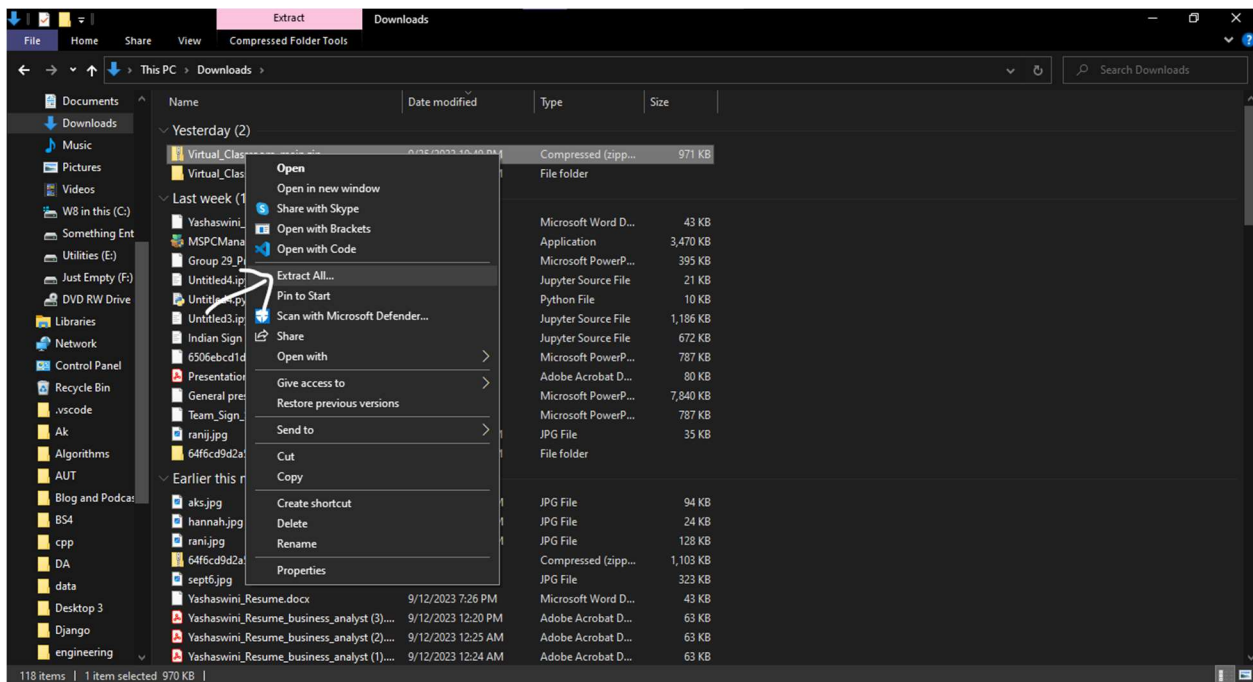

When the link is followed, the GitHub repository page will be opened.

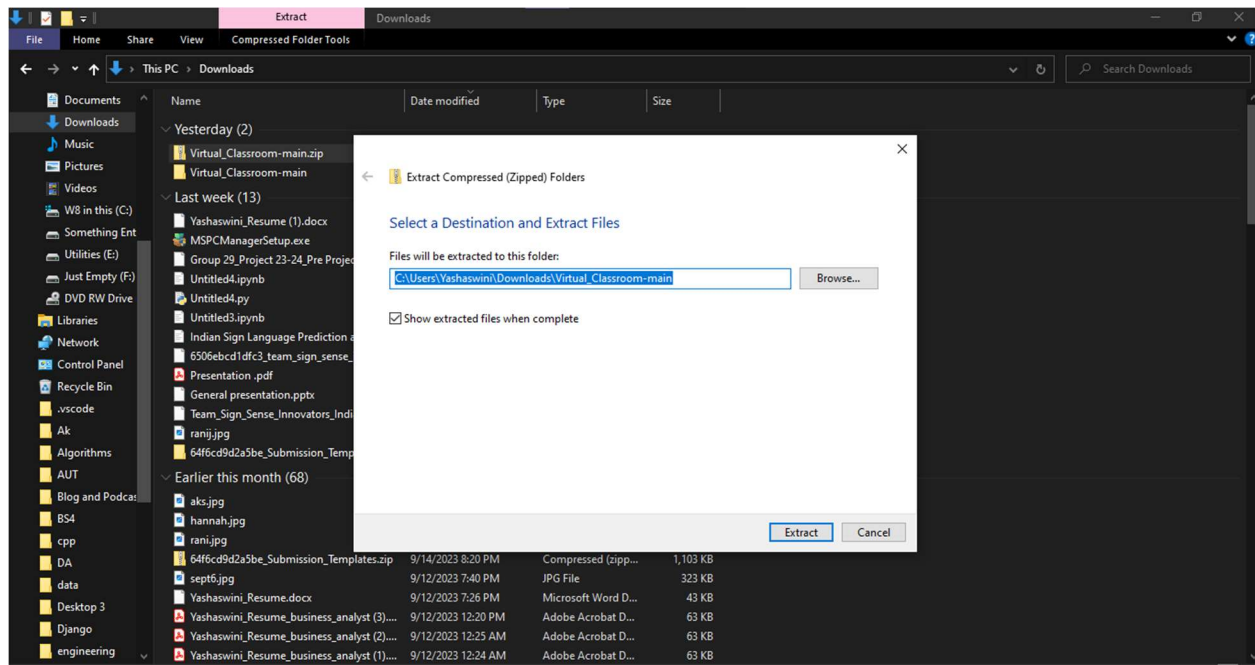

Click on Code

Click on Download Zip

Locate the downloaded zip and extract all

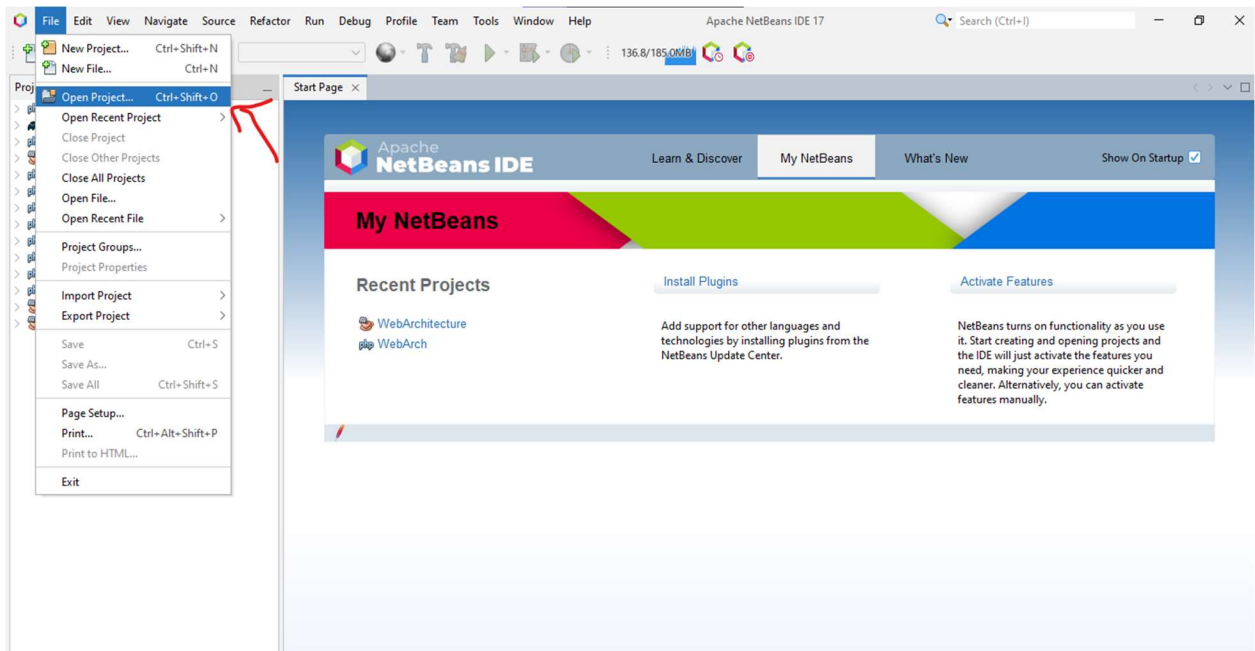

Extract to the desired Location

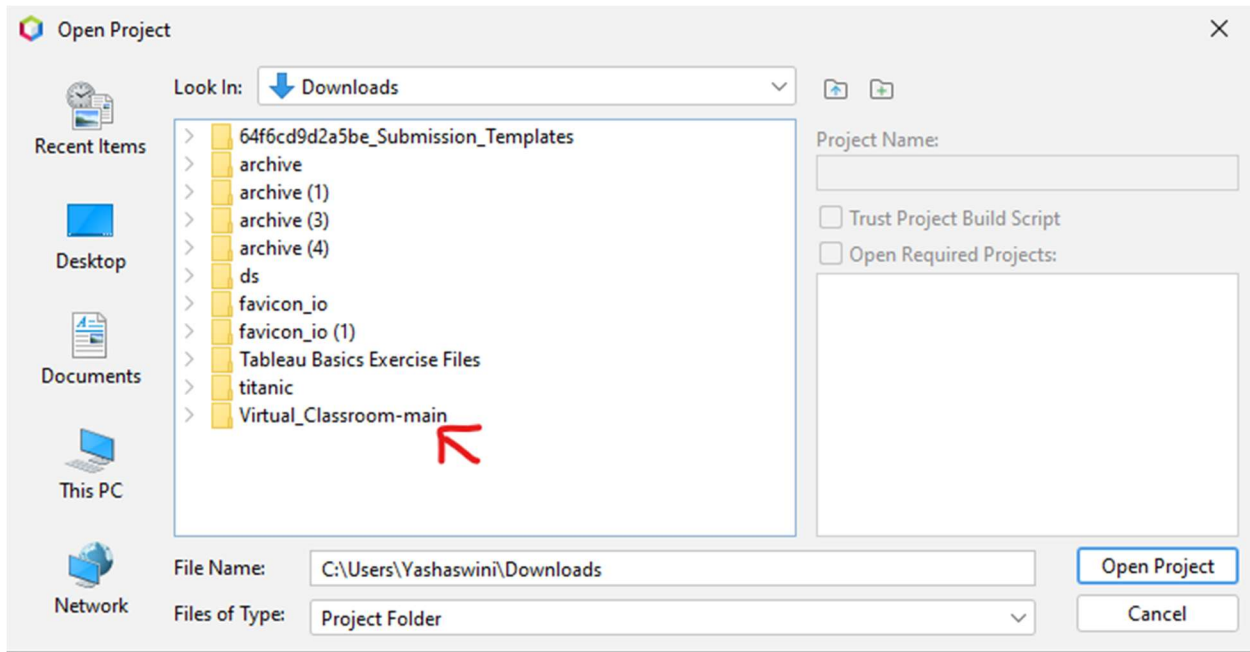

When extracted a folder with the same name as zip file containing all the files would be formed in the desired location.

Running the Project in NetBeans IDE

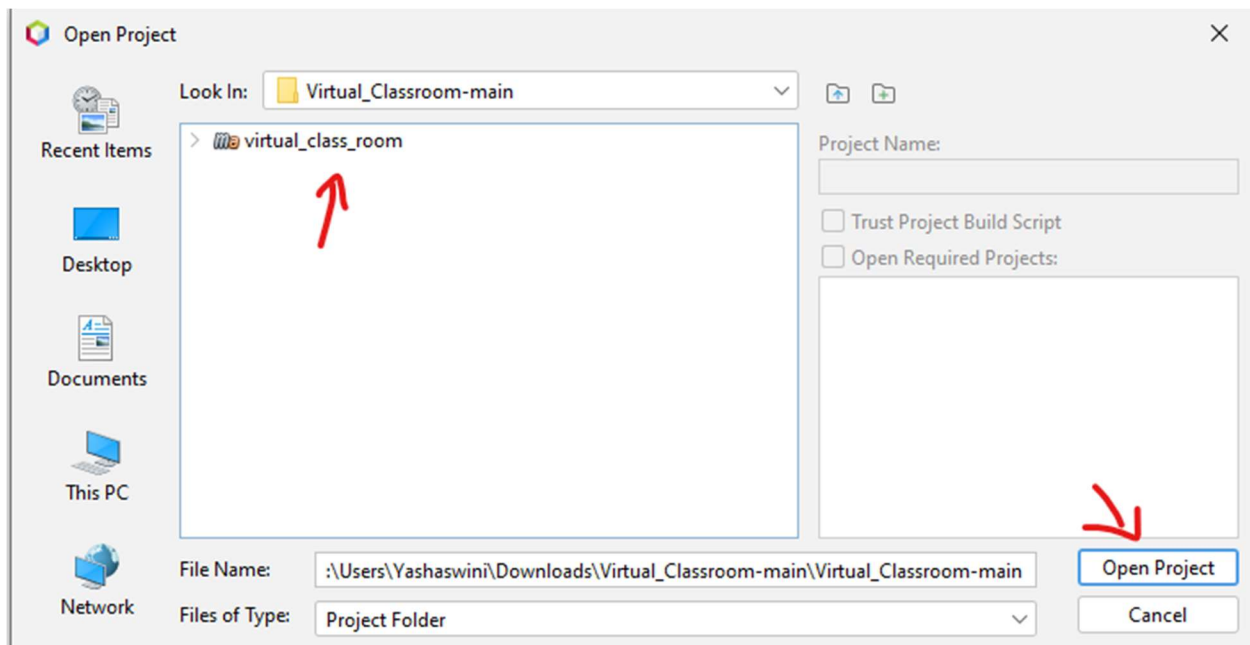

1. Open NetBeans
2. Click on File → Open Project

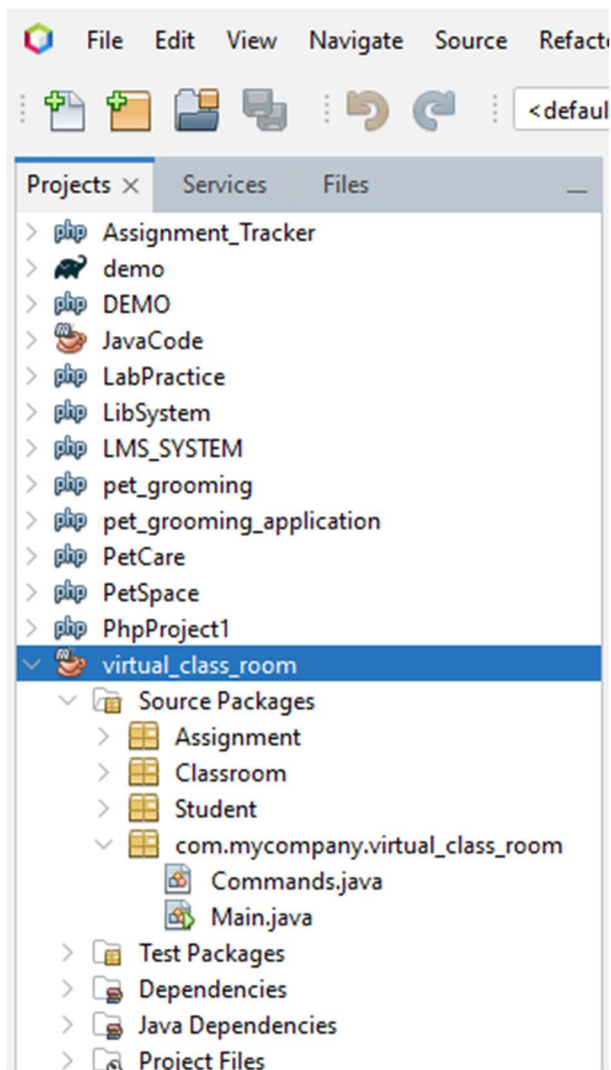

Click on Open Project

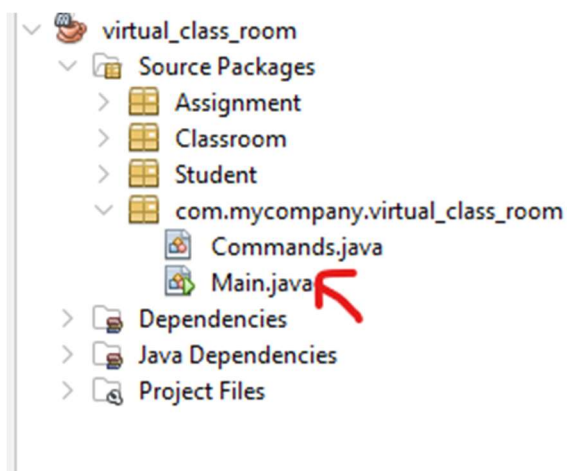

Locate the extracted folder.

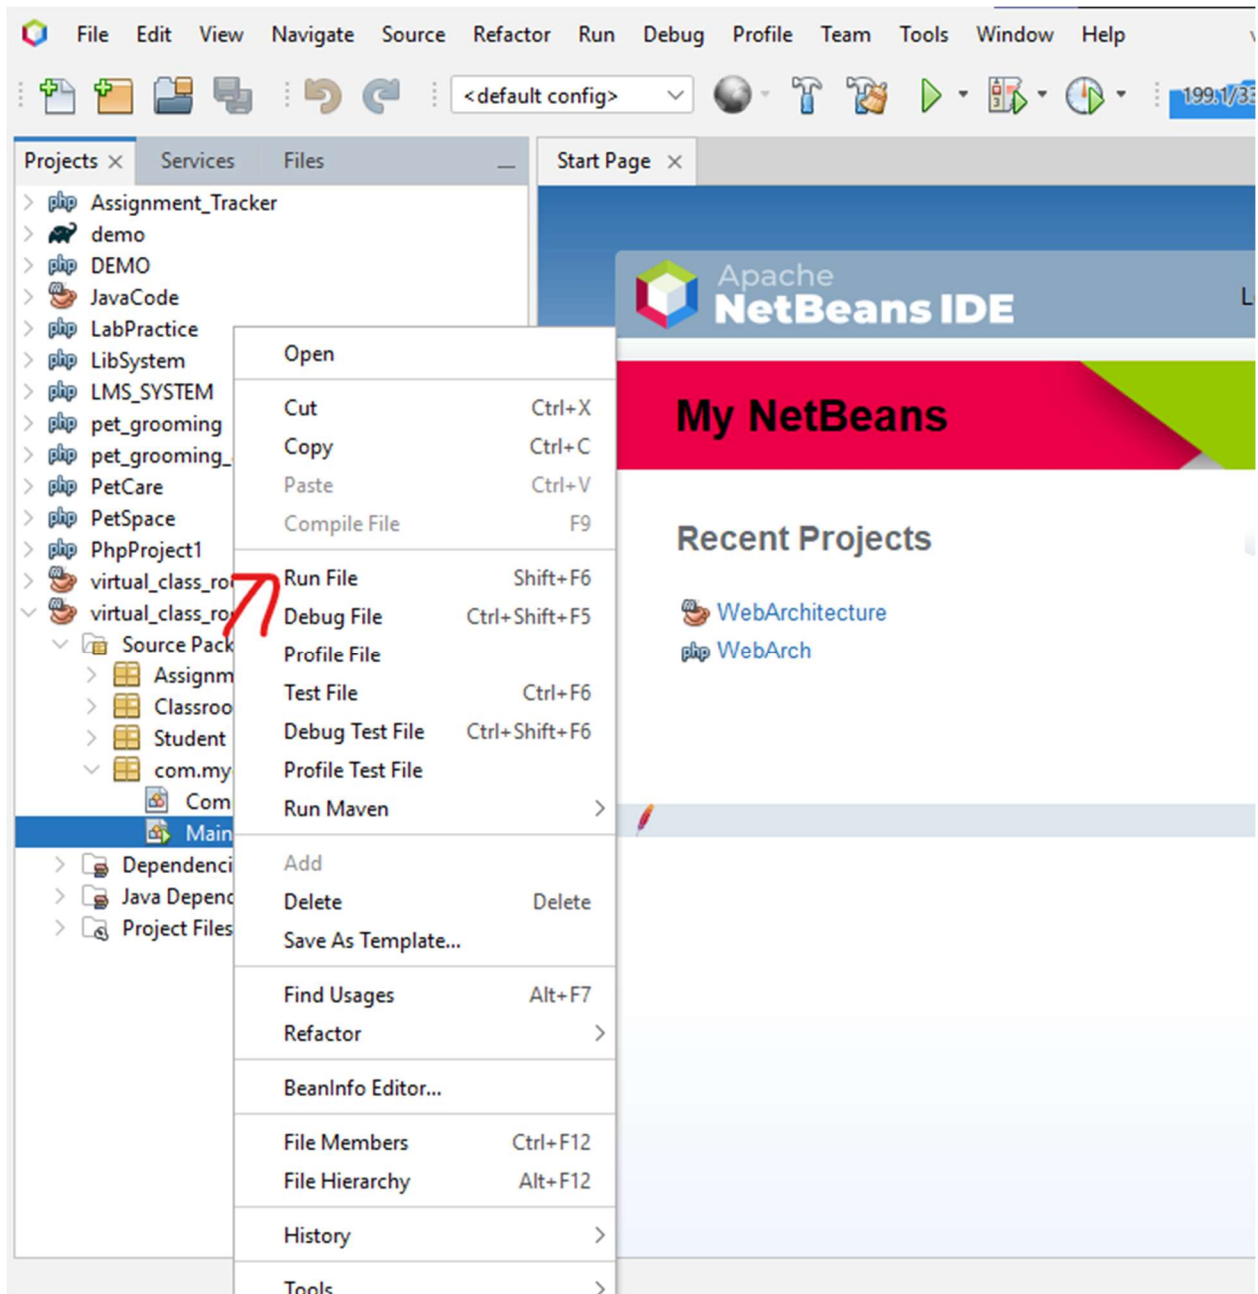

Click on the extracted folders and folders inside to get a java project that has a icon like shown. Select the project (click on virtual_class_room) and then click on open project.

In the side bar, the project would be open and expand the subfolders to locate Main.java

Right Click on Main.java and Run File
